How to Trade FVGs

FVGs are best traded when price revisits the imbalance zone. Traders should look for confluence such as structure alignment, volume confirmation, or a liquidity sweep before entry.

Common approach:

1. Identify FVG on your timeframe
2. Wait for price to return to zone
3. Confirm entry with price action or order flow

Strategy: Entry on Return to FVG

Entry and Exit Strategy

- Entry: At or near start of the FVG zone
- Stop-loss: Just outside the FVG (opposite direction)
- Take-profit: 1:1 or 1:2 risk-reward, or at the next key level

Avoid entering blindly. Use rejection candles, volume spikes, or order flow confluence.

Risk Management and Timeframes

FVGs appear on all timeframes but offer more reliability on:

- M15, H1, H4, and Daily

Limit risk to 1-2% per trade. Combine FVGs with overall market direction to increase win rate.
